

Unleash your **Symfony** project with **eZ Platform**

At **@Cloudflare** for **@sf\_php** by **@NovactiveSF**

**CLOUDFLARE**

- **21 year old company**
- **~80 employees**
- **Open Source Specialists**
- **First eZ project in 2005**
- **First Symfony project 2012**
- **Digital Consulting**
- **Web Development**
- **e-Commerce**
- **Web Marketing**
- **Mobile Apps**
- **CRM**

# Let's get started!

Projects are getting complex

# Standards

- Latest stable technology
- Scalable
- Performant
- Robust
- Secure
- Open Source
- Best practices

# Symfony

- HTTP Foundation
  - Request/Response
  - Caching
- Dependency Injection Container
- Twig
- Event Dispatcher
- PSR
- Tests
- YAML for configuration
- HMVC
- Routing
- Forms
- Security
- Command
- Deployment

# How about features?

A framework does not  
provide any!

*« Symfony is a set of PHP  
Components, a Web Application  
framework, a Philosophy, and a  
Community — all working together in  
harmony. »*

*<http://symfony.com>*

**“Content Is King.**

Content is where I expect much of the real money will be made on the Internet, just as it was in broadcasting.”

–Bill Gates (1/3/1996)

# Features to manage Content

<b>CRUD</b>	<b>Multilingual</b>
<b>Versionning</b>	<b>Media library</b>
<b>Users</b>	<b>Permissions</b>
<b>Archive</b>	<b>Multi websites</b>
<b>Workflows</b>	<b>WYSIWYG</b>

**Should we re develop all of them all the time?**

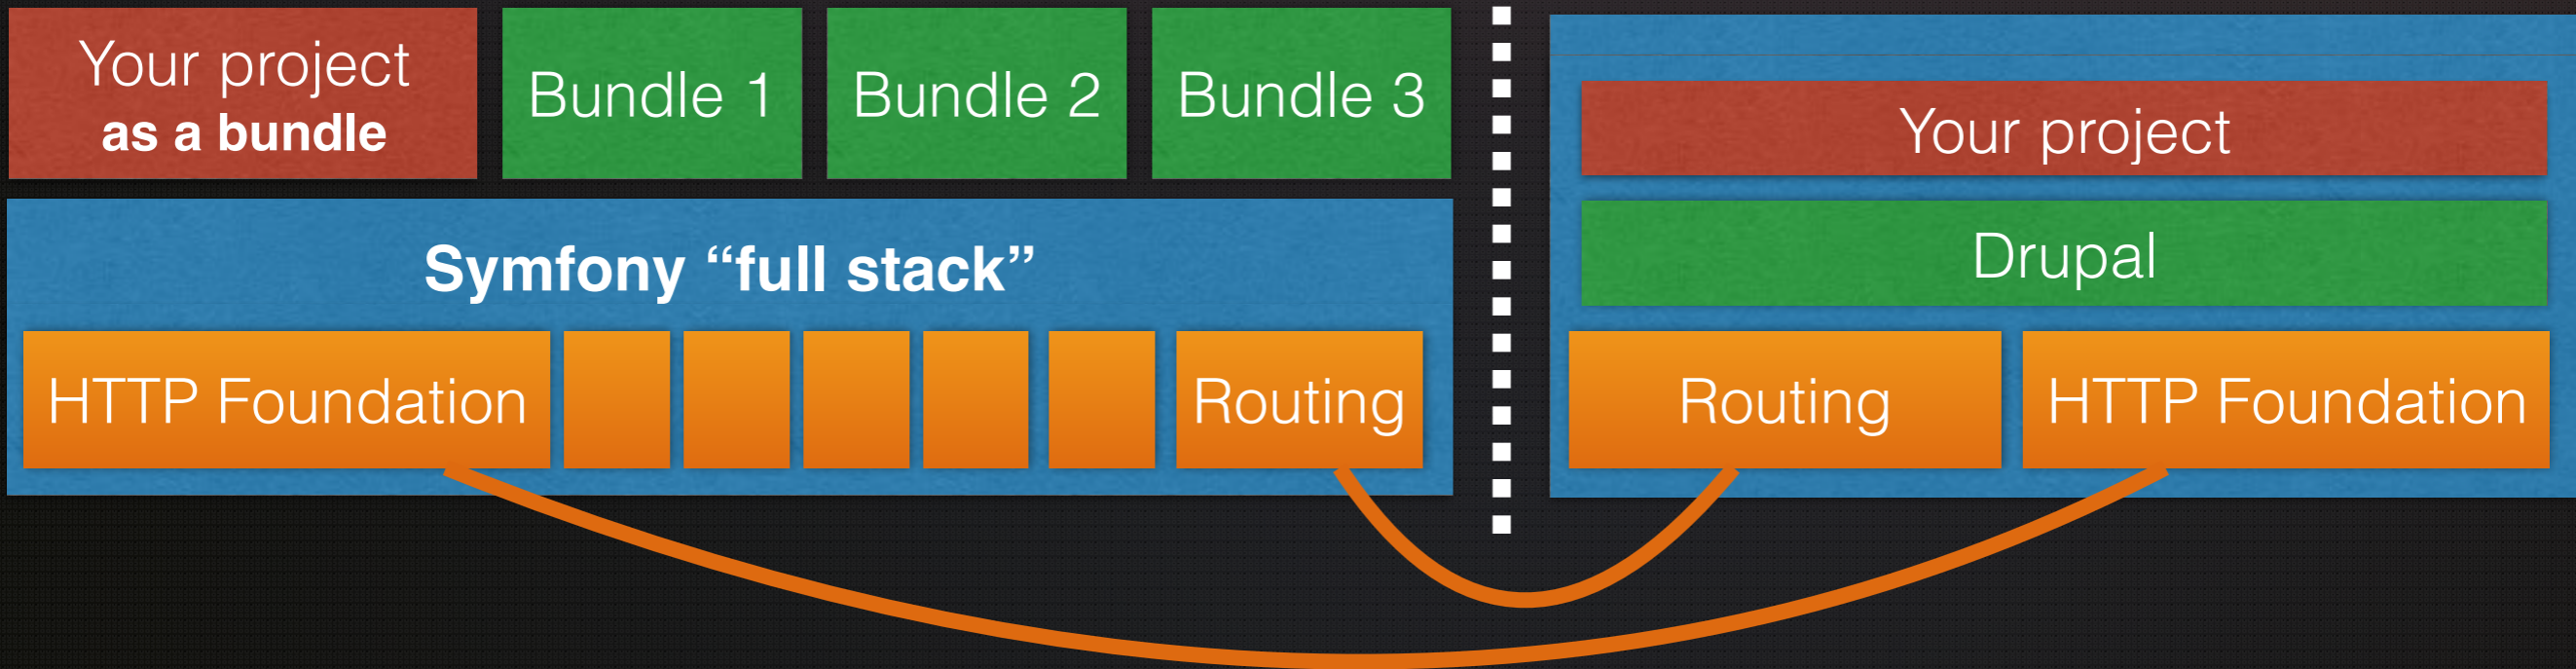

# Content Management System

# Full stack / Components

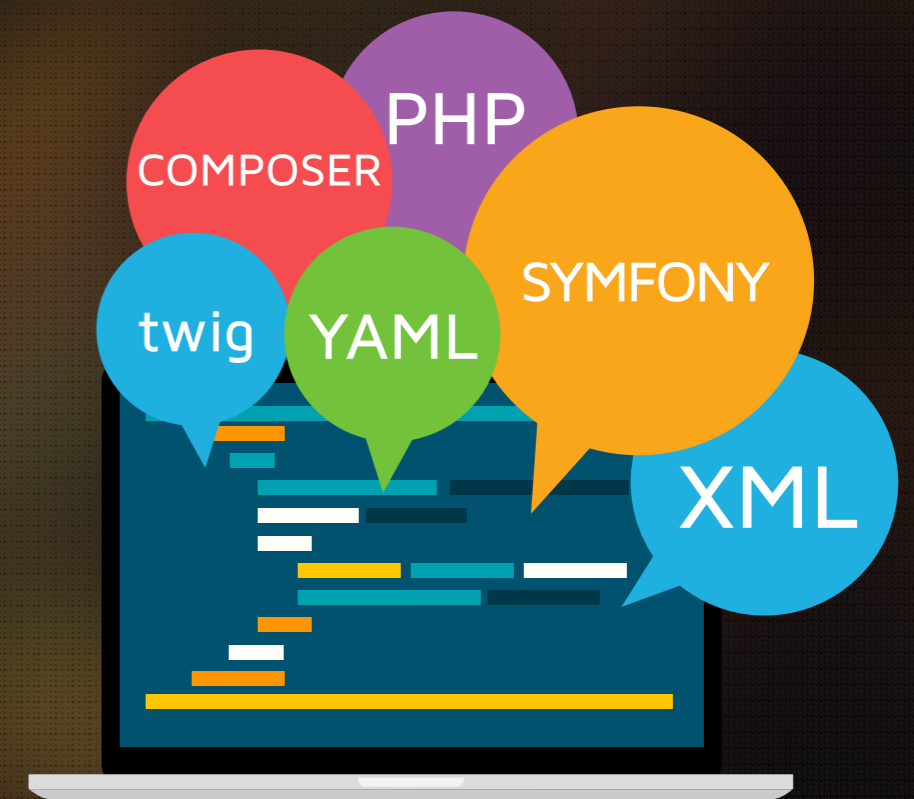

## Full-stack CMS

## CMS with Components

# Advantages

- ✓ A leading PHP framework
- ✓ Faster development by using any bundle in the ecosystem
- ✓ Standardization
- ✓ Reduce learning curve for developers

# Headless/Decoupled

Versus Traditional

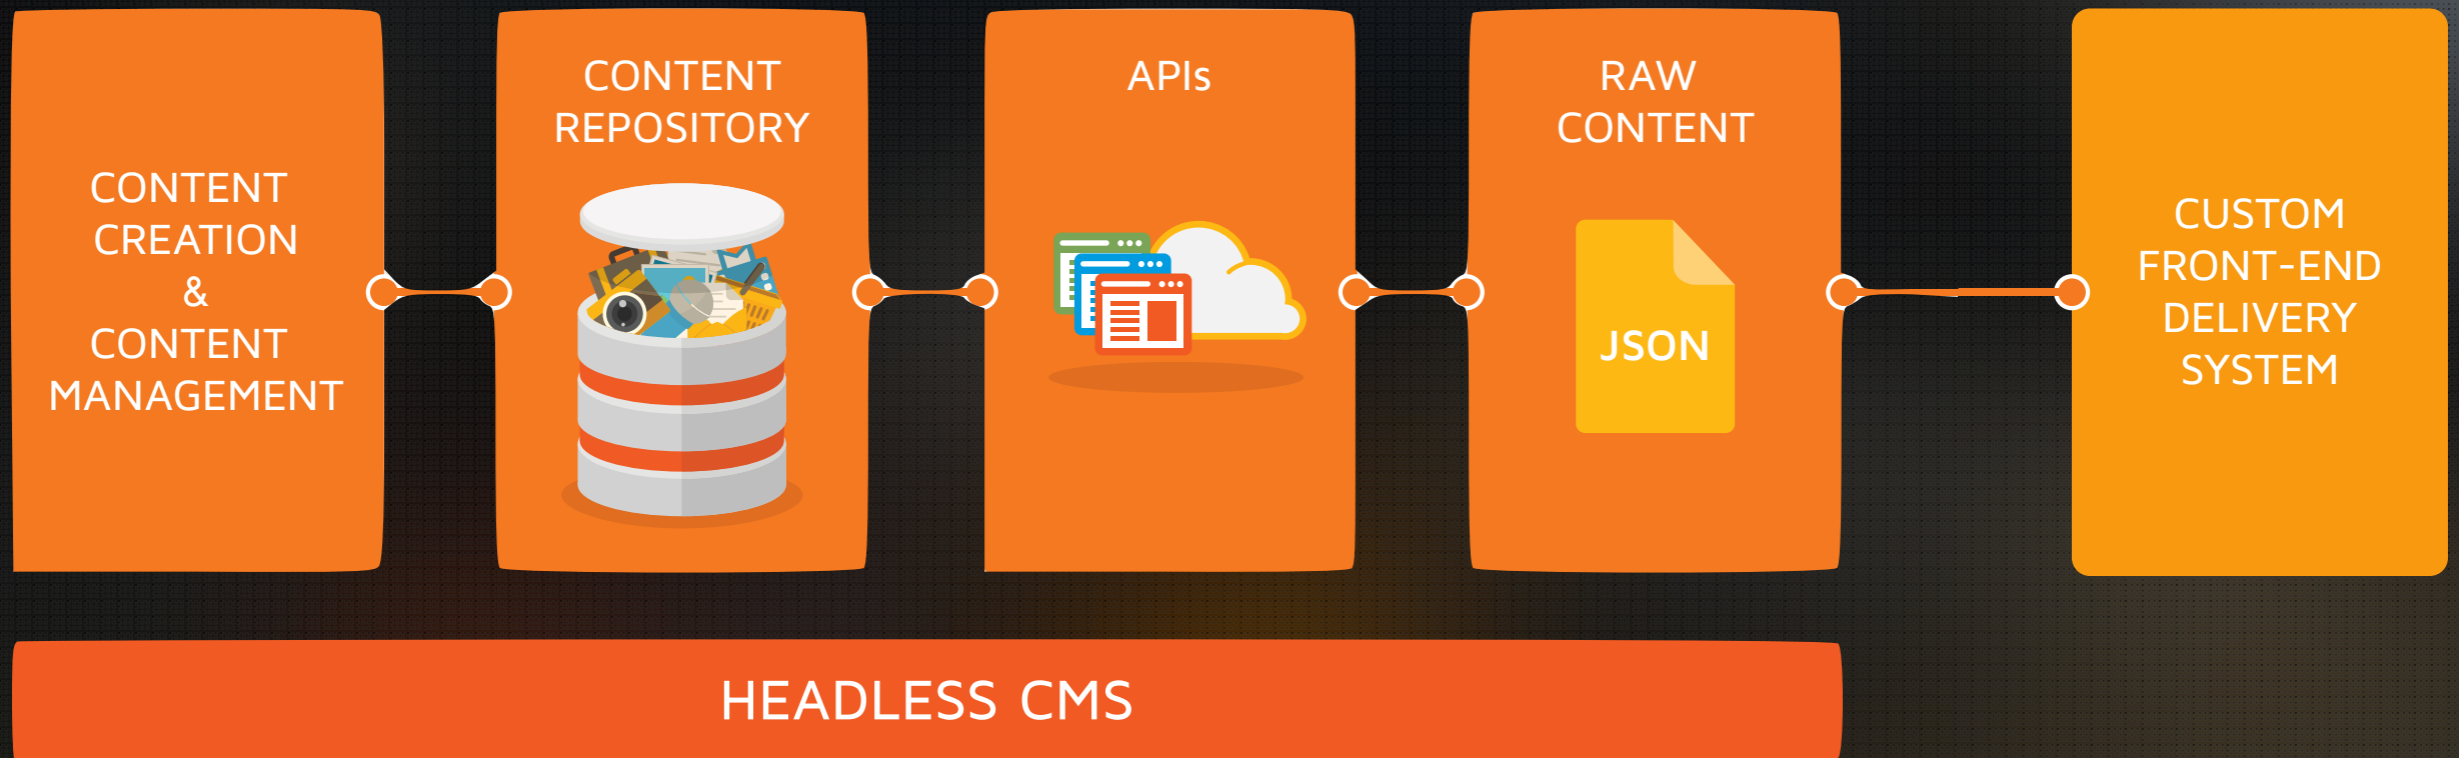

# Decoupled CMS

Separates the content creation process  
from the delivery process

# Headless CMS

Content creation, storage and delivery only  
— presentation not handled in the CMS

# Introducing eZ Platform

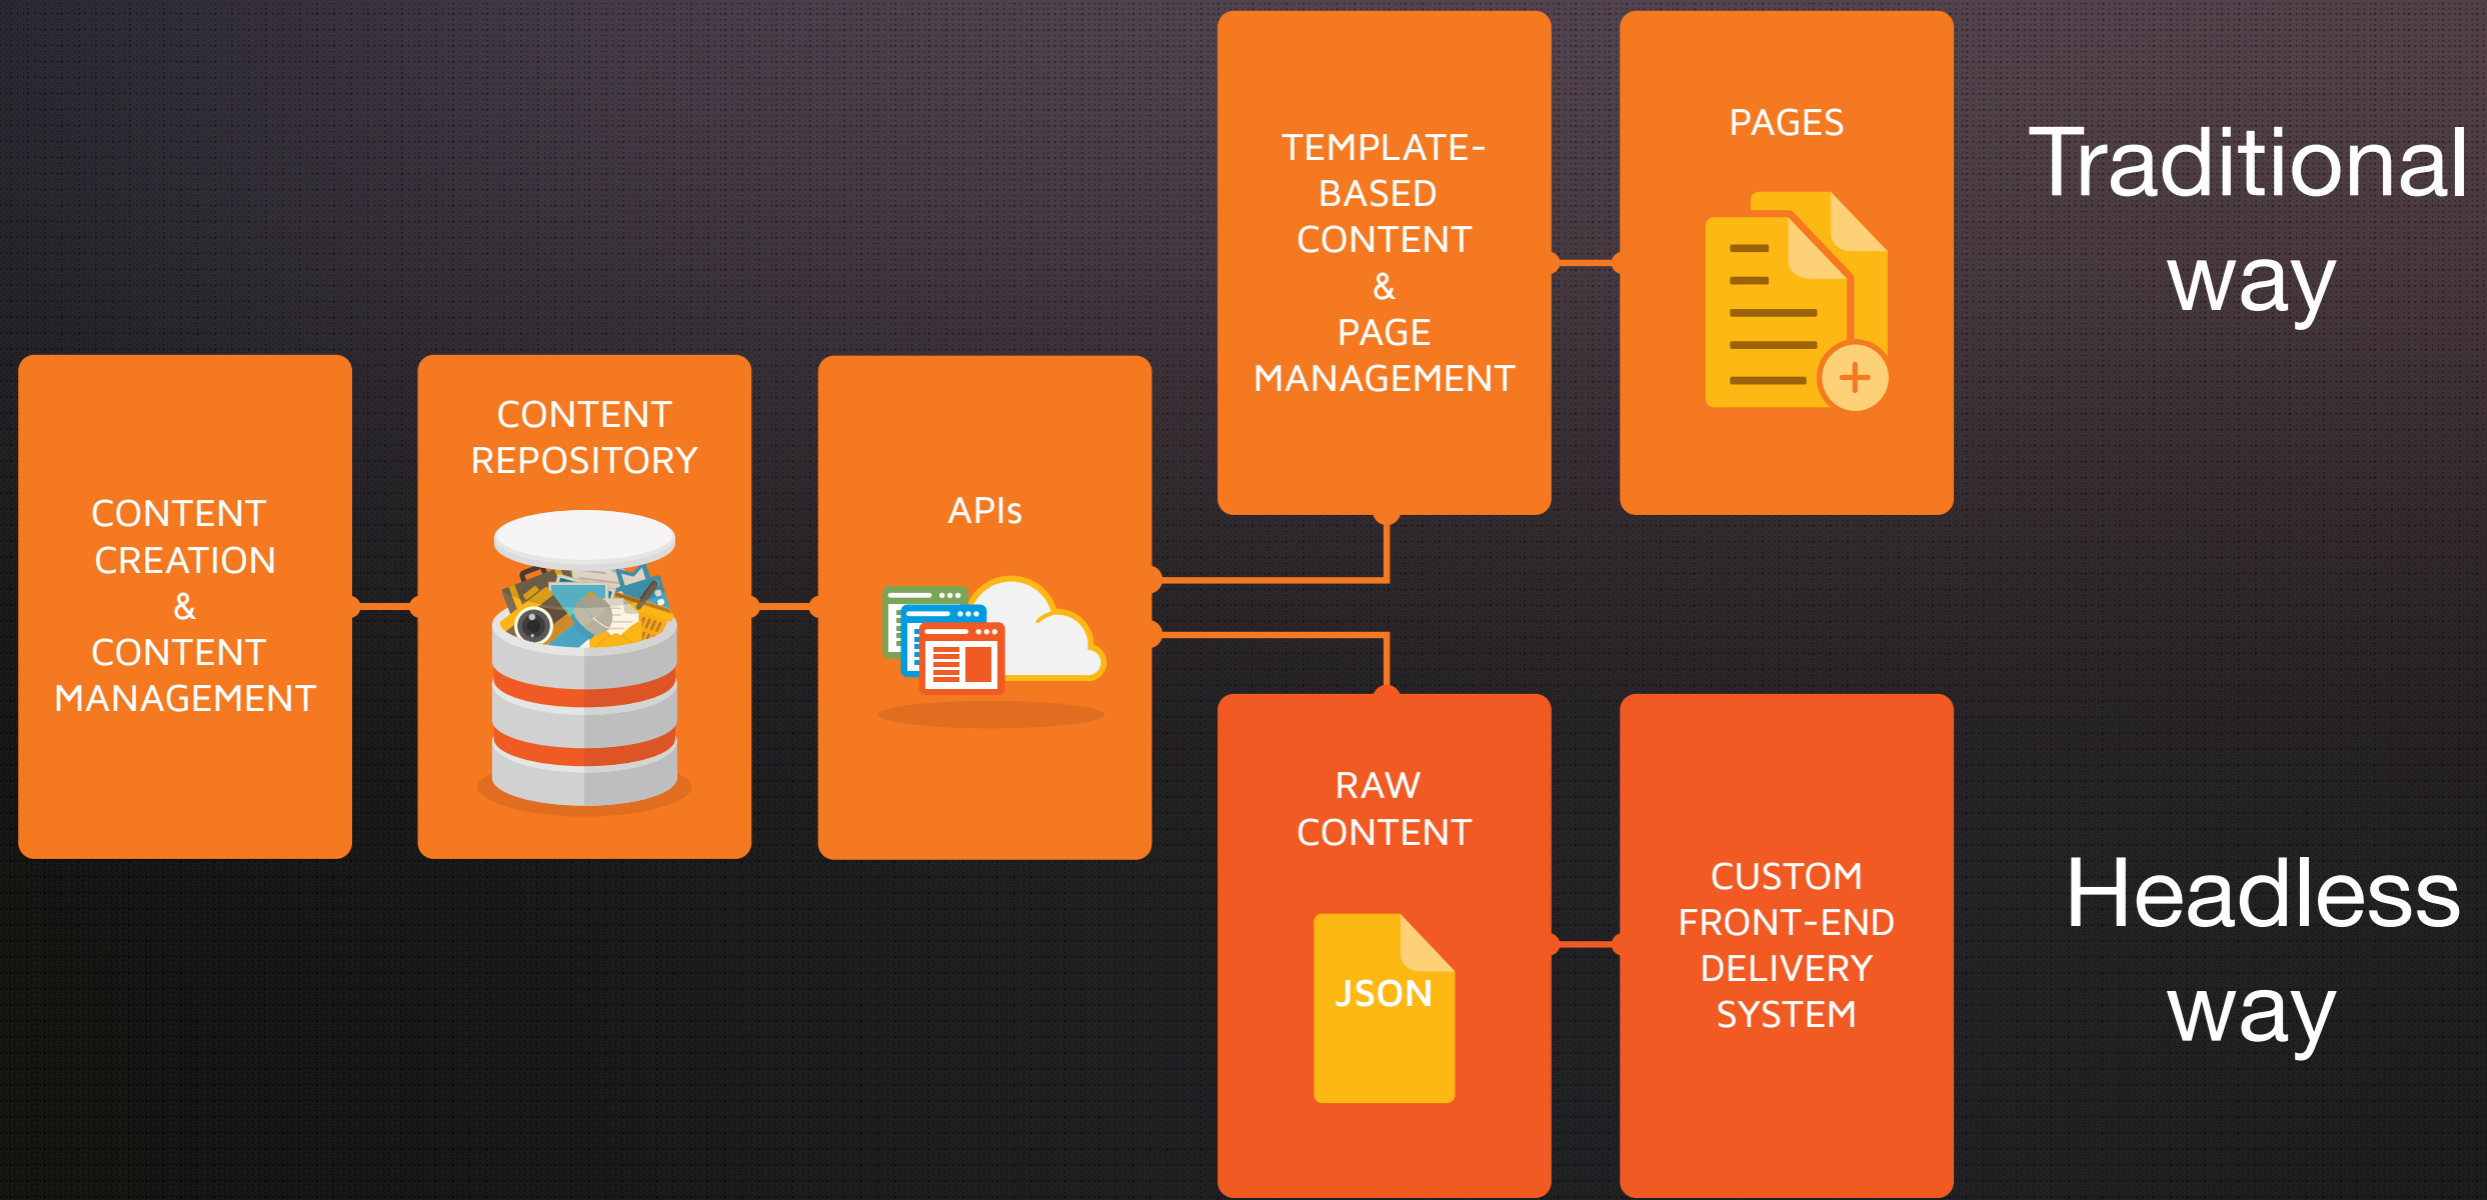

A “Symfony full-stack” CMS

# eZ History

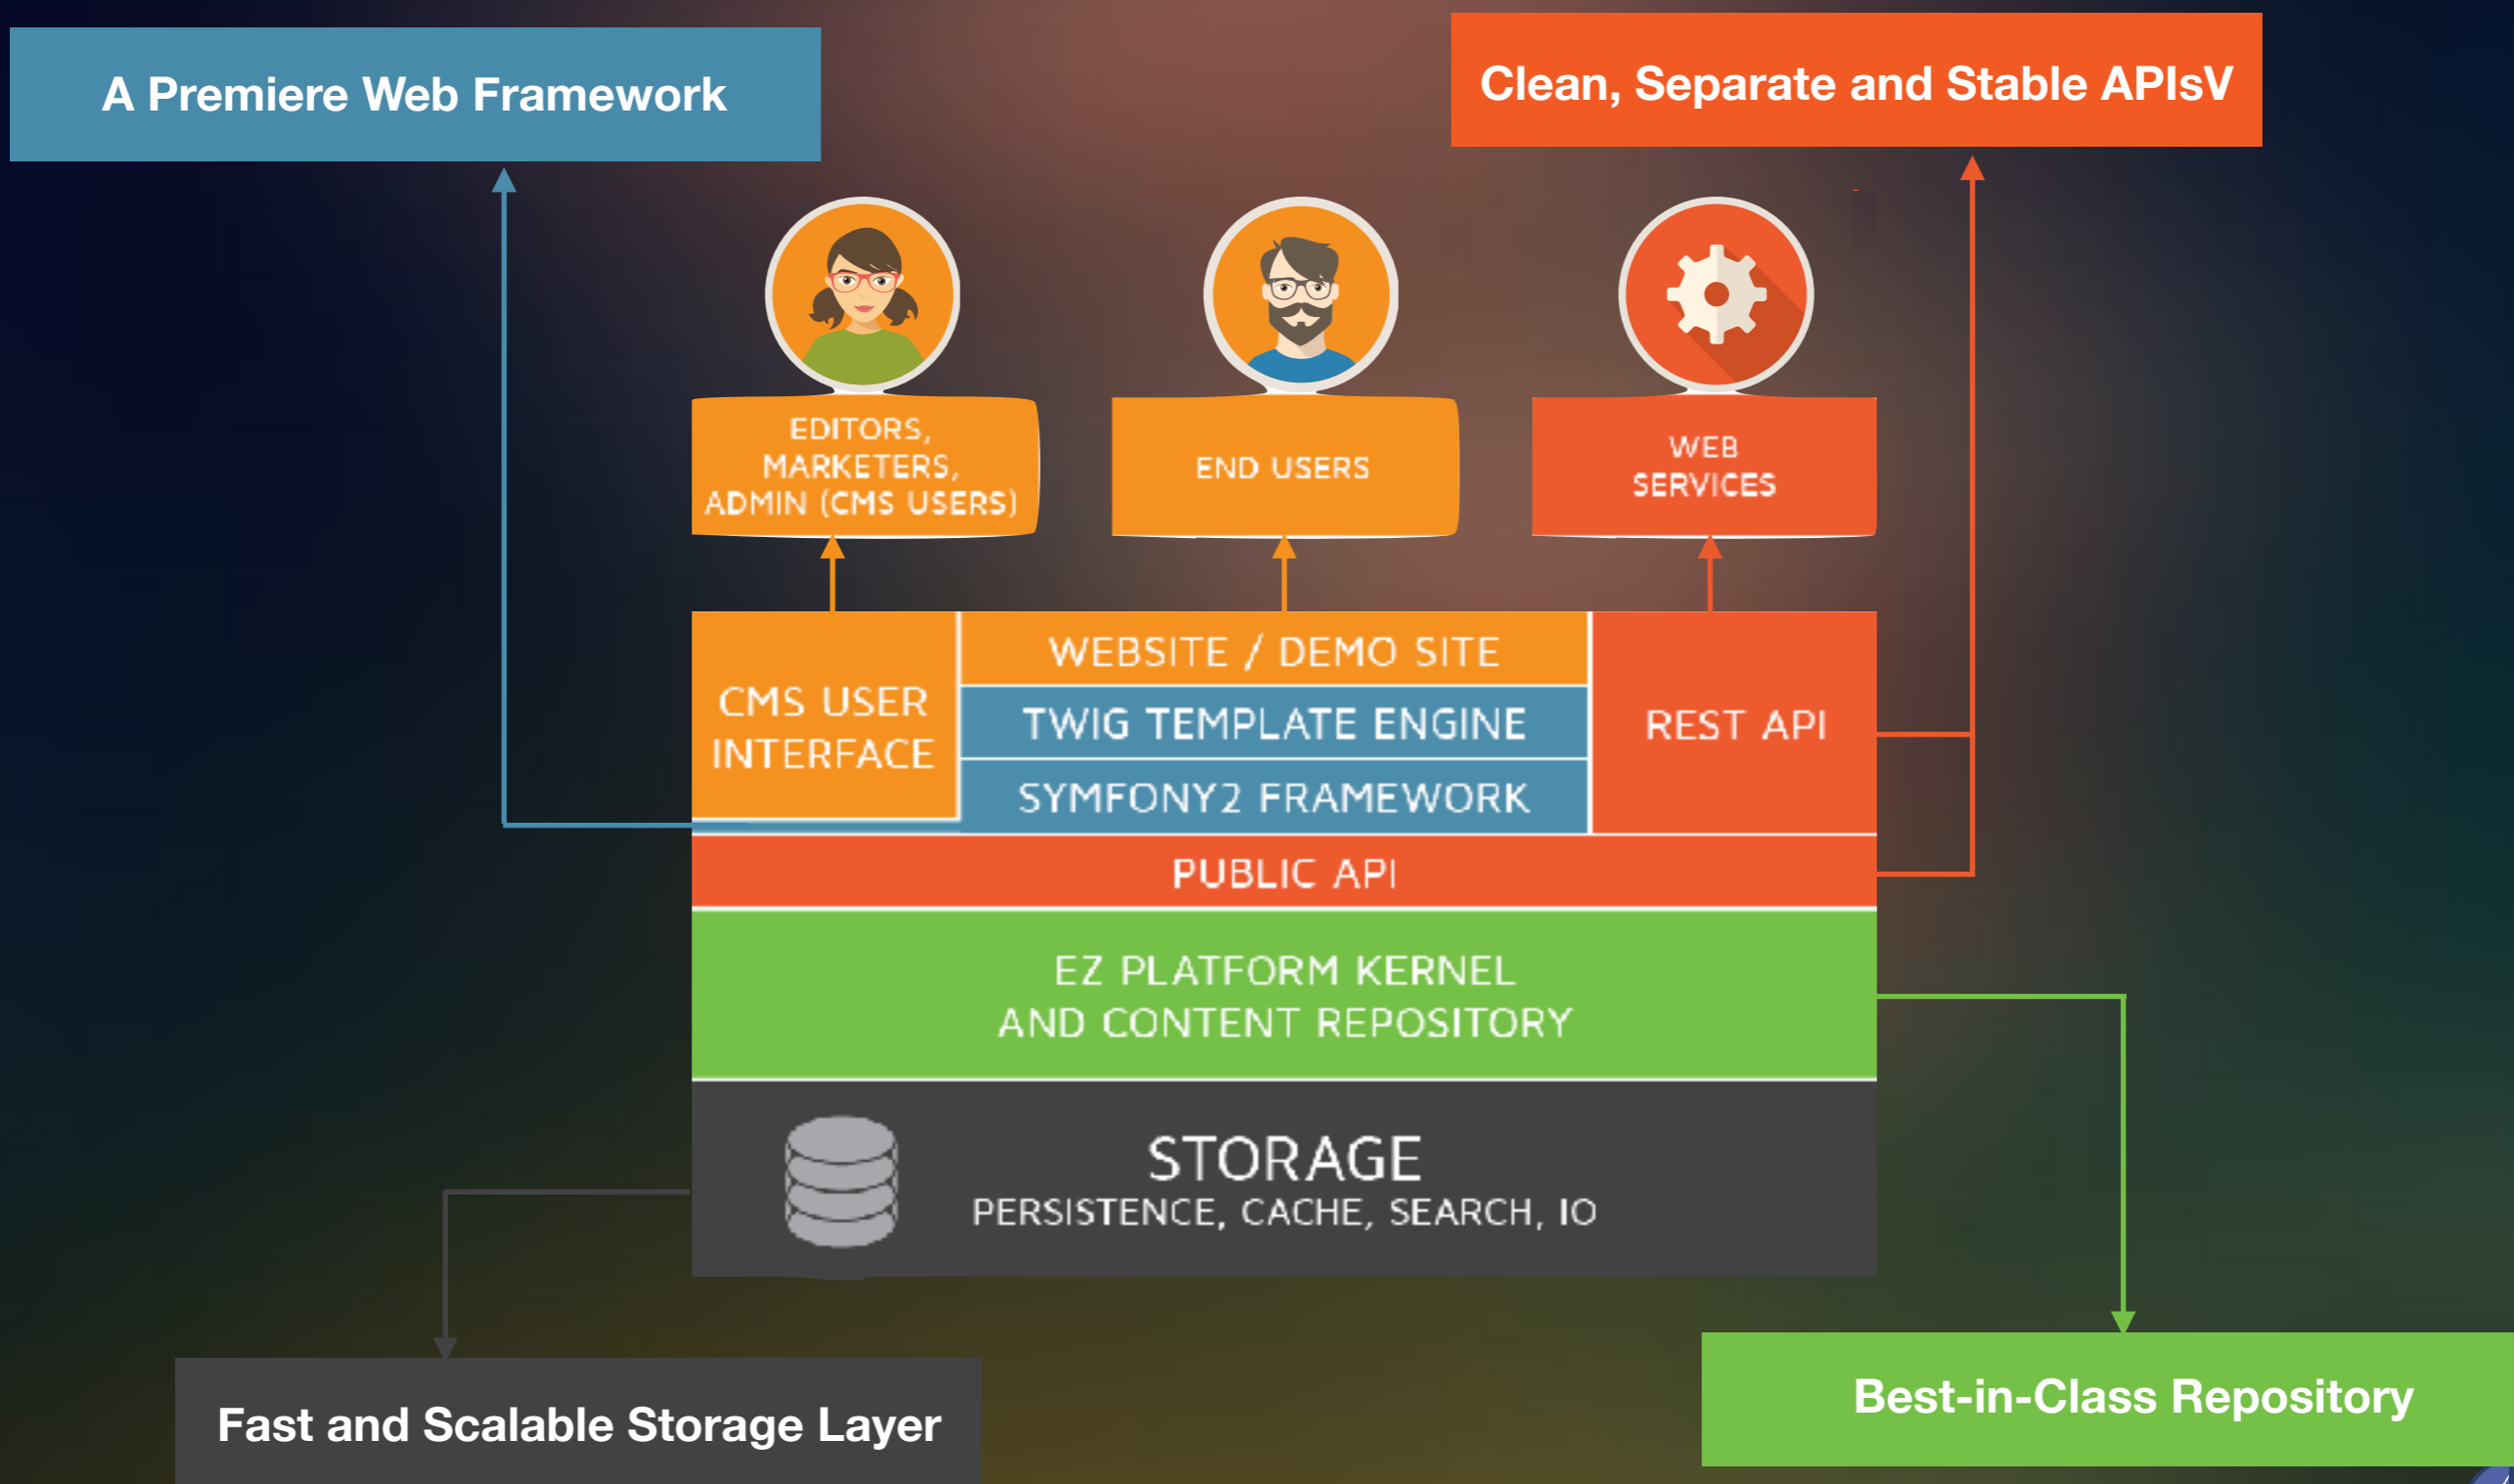

- 1999 - 2003 eZ Publish 2.x** Simple PHP CMS
- 2003 - 2008 eZ Publish 3.x** Flexible model, workflows , PHP 4, Templates etc.
- 2007 - 2012 eZ Publish 4.x** PHP 5, 6-months release cycle, introduction of an Enterprise version
- 2012 - 2016 eZ Publish Platform** Dual kernel, full Symfony stack and Legacy
- End of 2016 eZ Platform** Full Symfony stack  
PHP 7

# eZ Approach

# eZ Architecture

UI: Admin and power users

UI: End users

# Basic Built-in Features

- ✓ SiteAccess (multi websites)
- ✓ Administration Interface
- ✓ Multi Languages
- ✓ REST API
- ✓ Content Types
- ✓ Workflows
- ✓ Content Versioning
- ✓ Roles and Permissions
- ✓ Semantic Content Model (Hierarchical Content Tree, associate relationships between content items, etc)

# Raw content

# Design

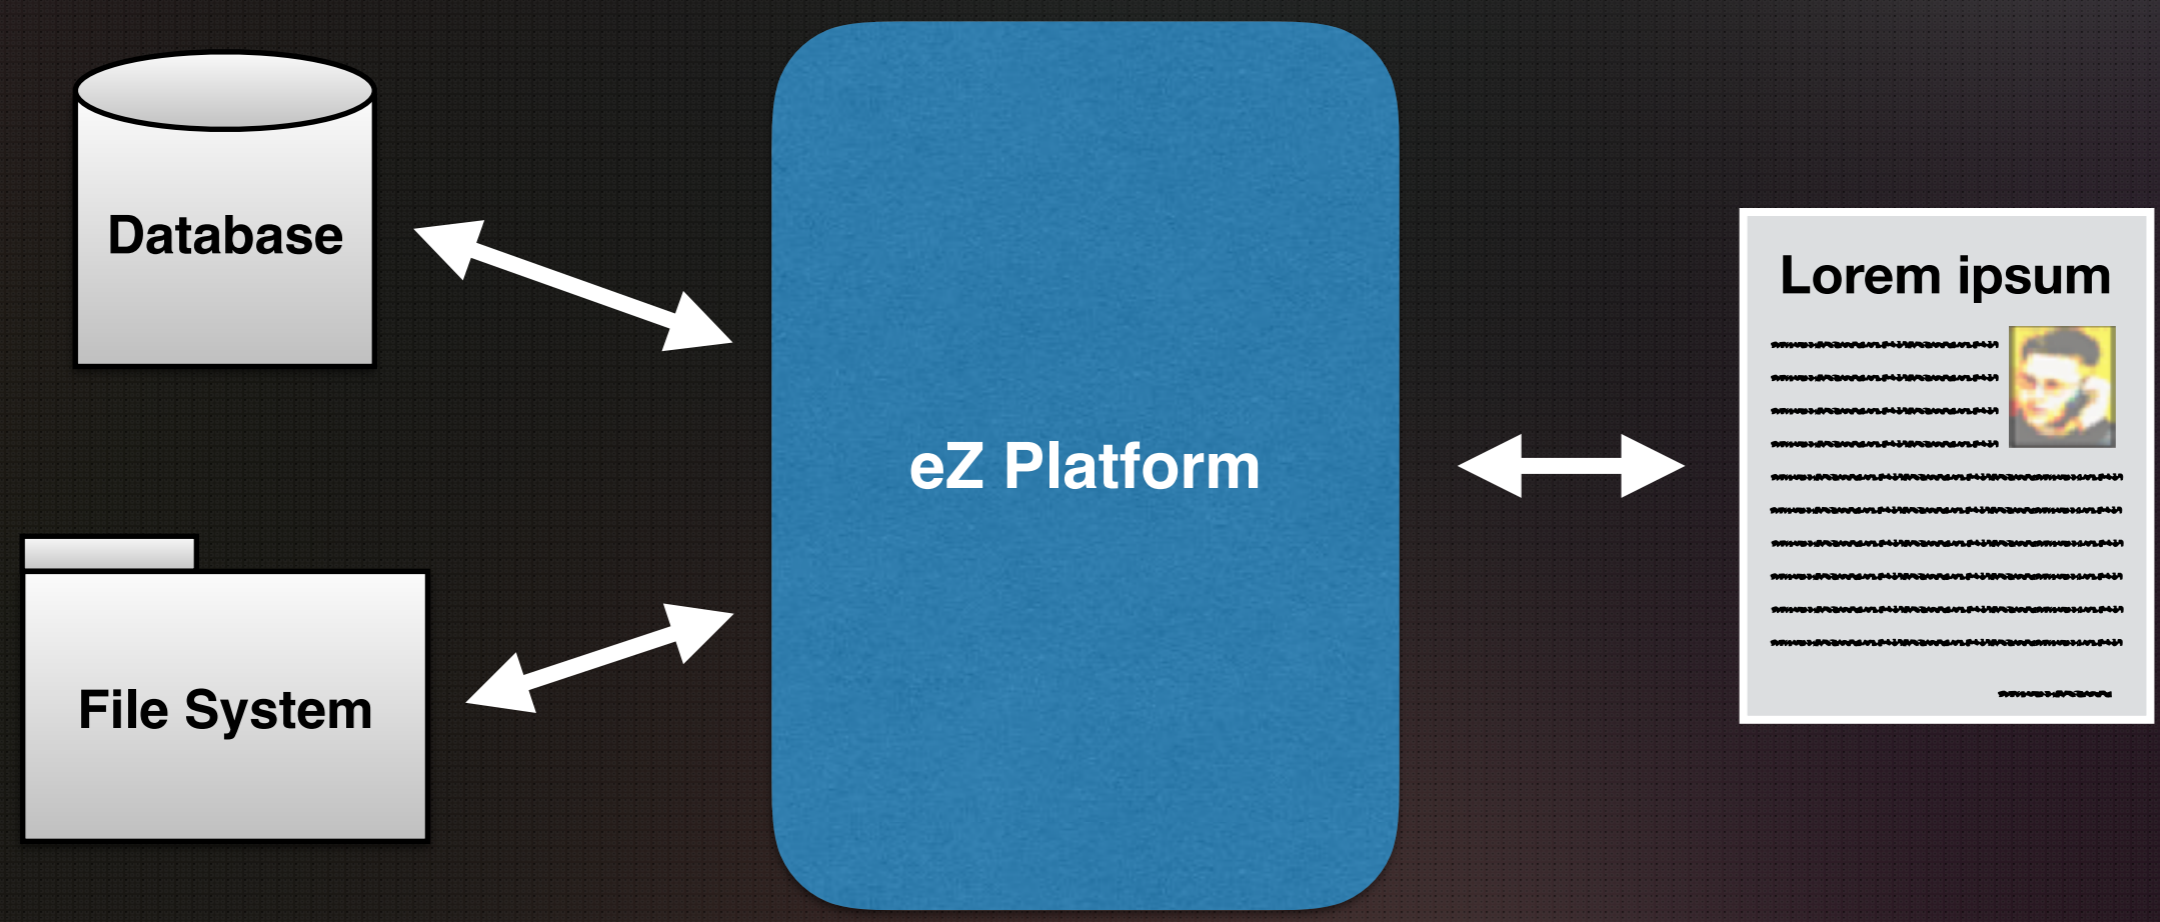

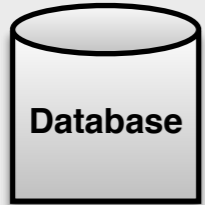

# Web page

# Separation of concerns

No design nor html in the database

	Content	Design	Settings
 Database	✓ Text ✓ Structure	✗	✗
 File System	✓ Images ✓ Files	✓ HTML + CSS ✓ Templates	✓ Yaml files

# Data storage

No configuration in the database

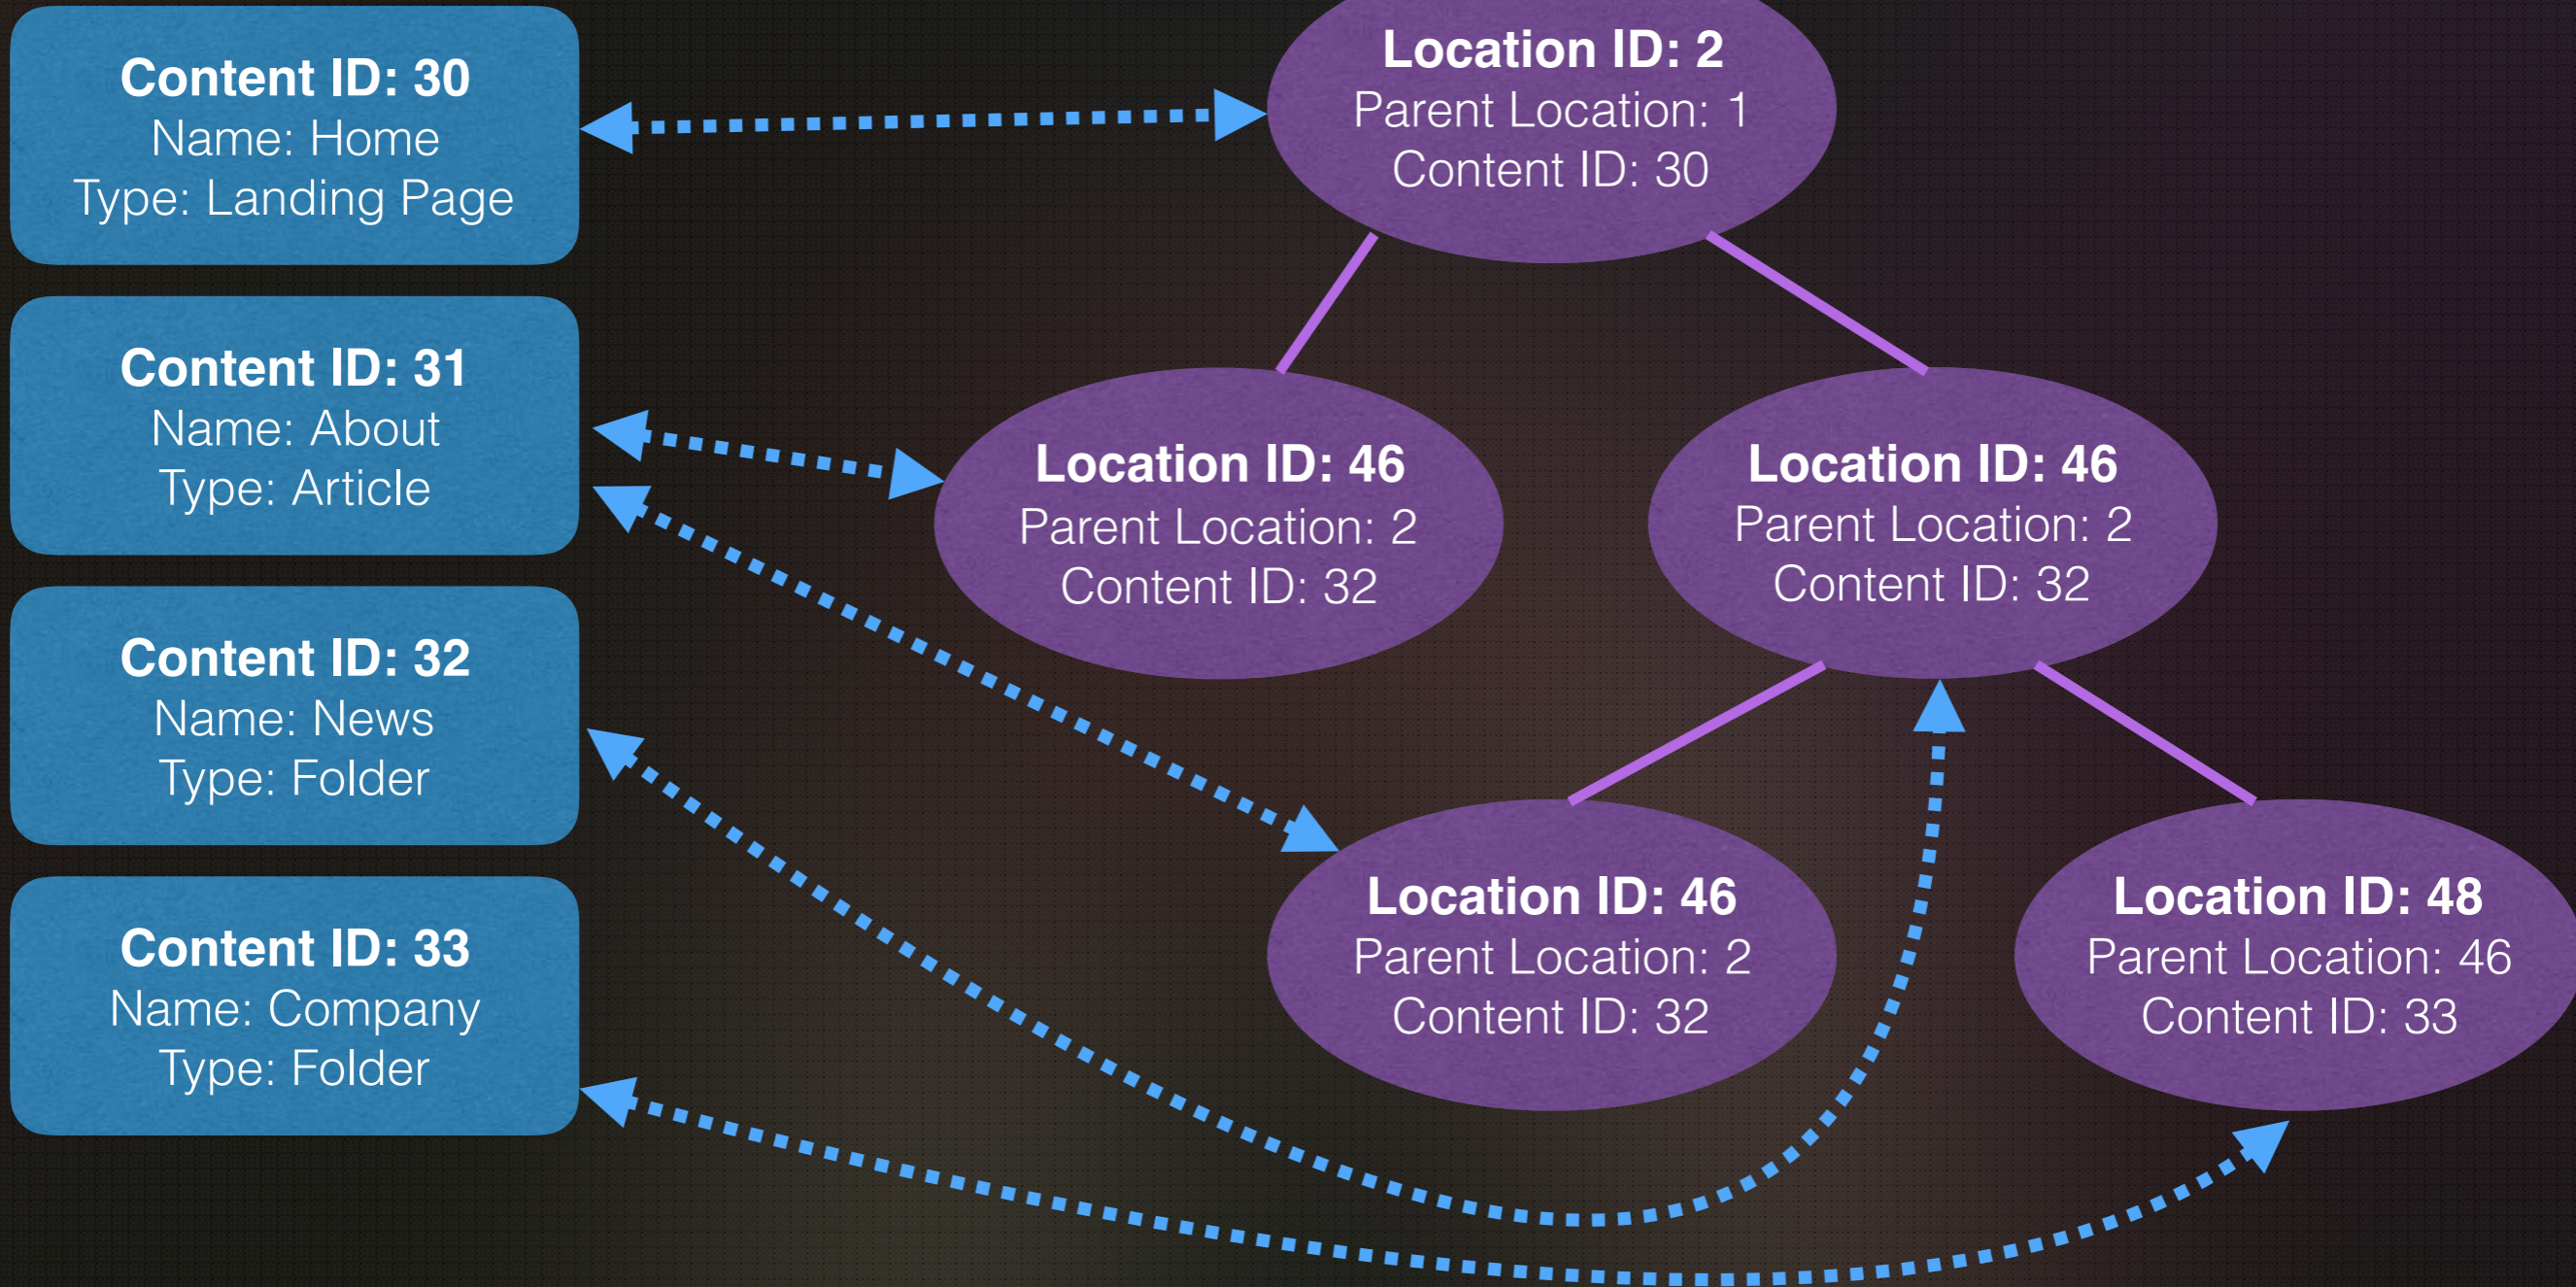

# Hierarchical organization

**Content** on one side  
**Location** on the other side

# Contents

# Locations

Multiple locations capability

# SiteAccess

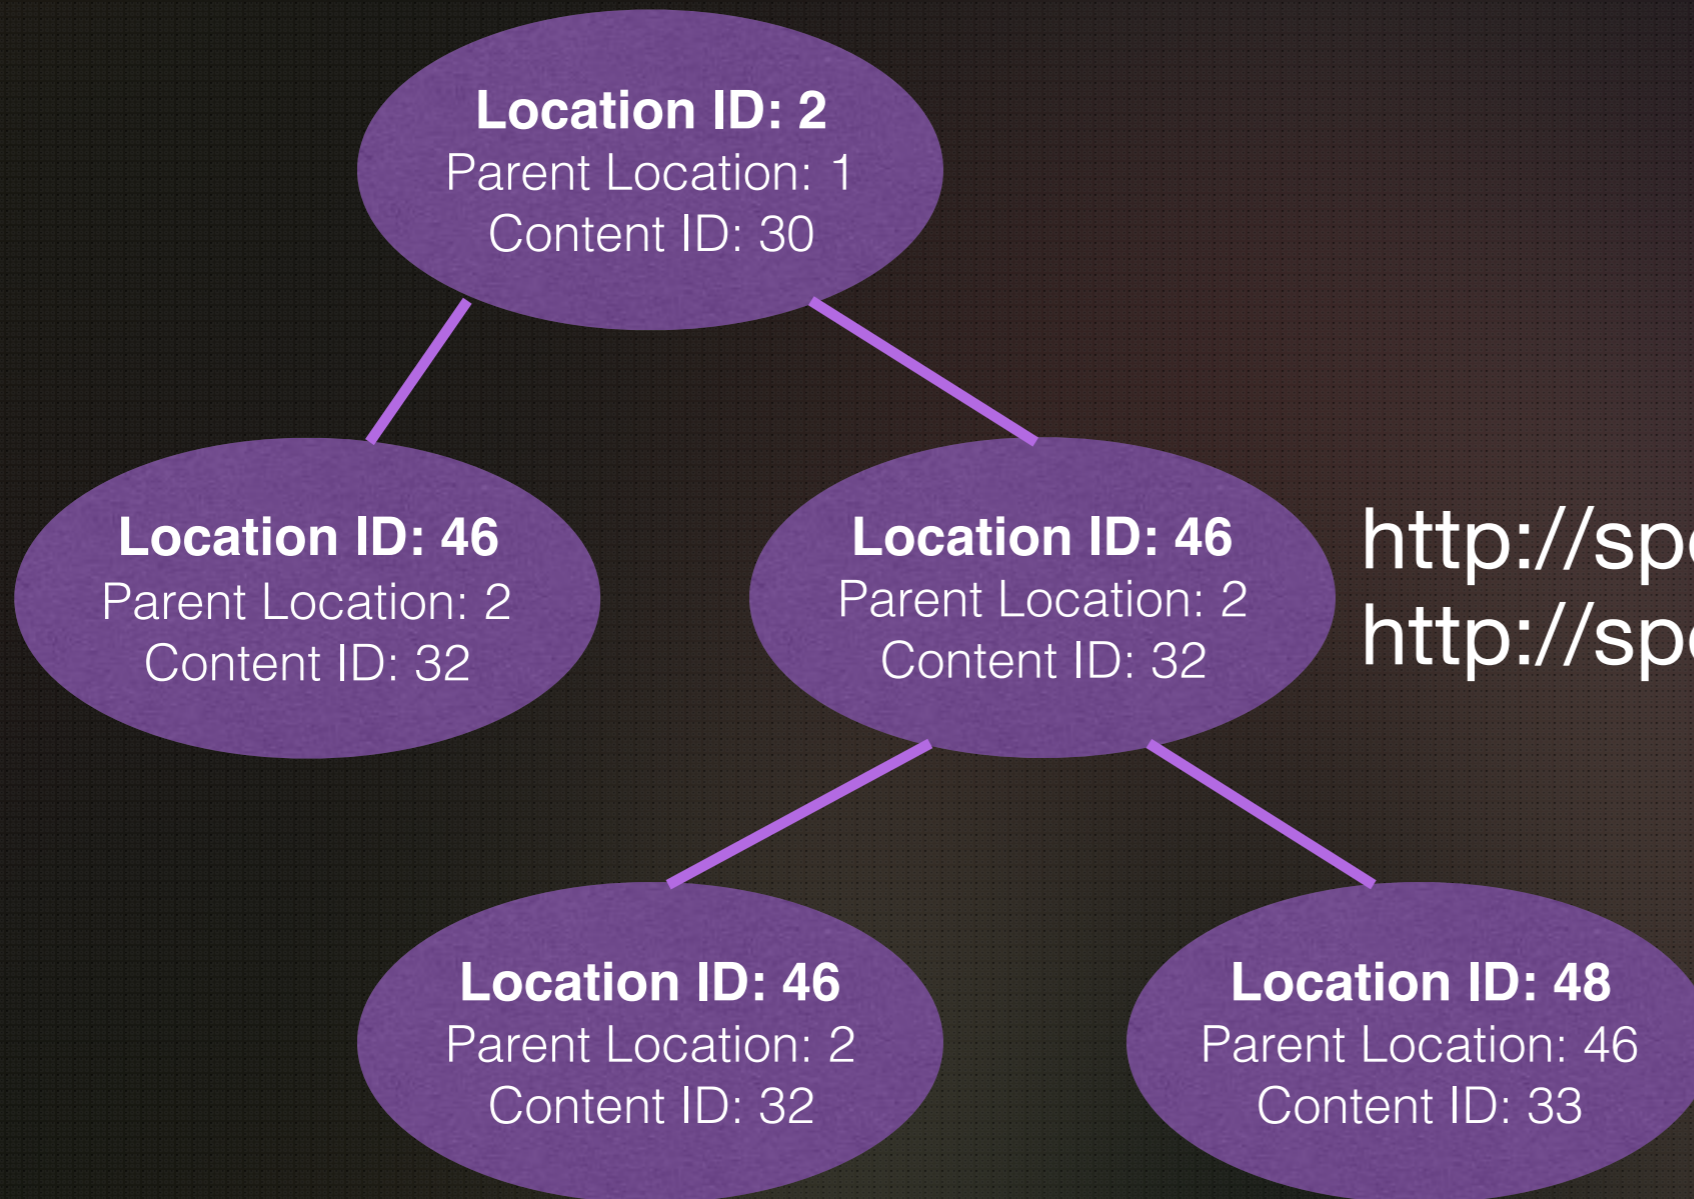

- ✓ eZ Invention for DX
- ✓ Matches a certain URL to a specific combination of configurations
- ✓ `http://example.co.uk/ || http://example.com/uk/ || http://uk.example.com/`
- ✓ Mobile, Intranets, unlimited options!

# SiteAccess

# Installation

Composer

Download

Platform.sh

# Composer install

```
$ curl -sS https://getcomposer.org/installer | php

$ docker run --rm --p 3333:3306 --name ezdbcontainer -e
MYSQL_ROOT_PASSWORD=ezplatform mariadb:10.0

$ php -d memory_limit=-1 composer.phar create-project
ezsystems/ezplatform

$ cd ezplatform

$ php app/console doctrine:database:create

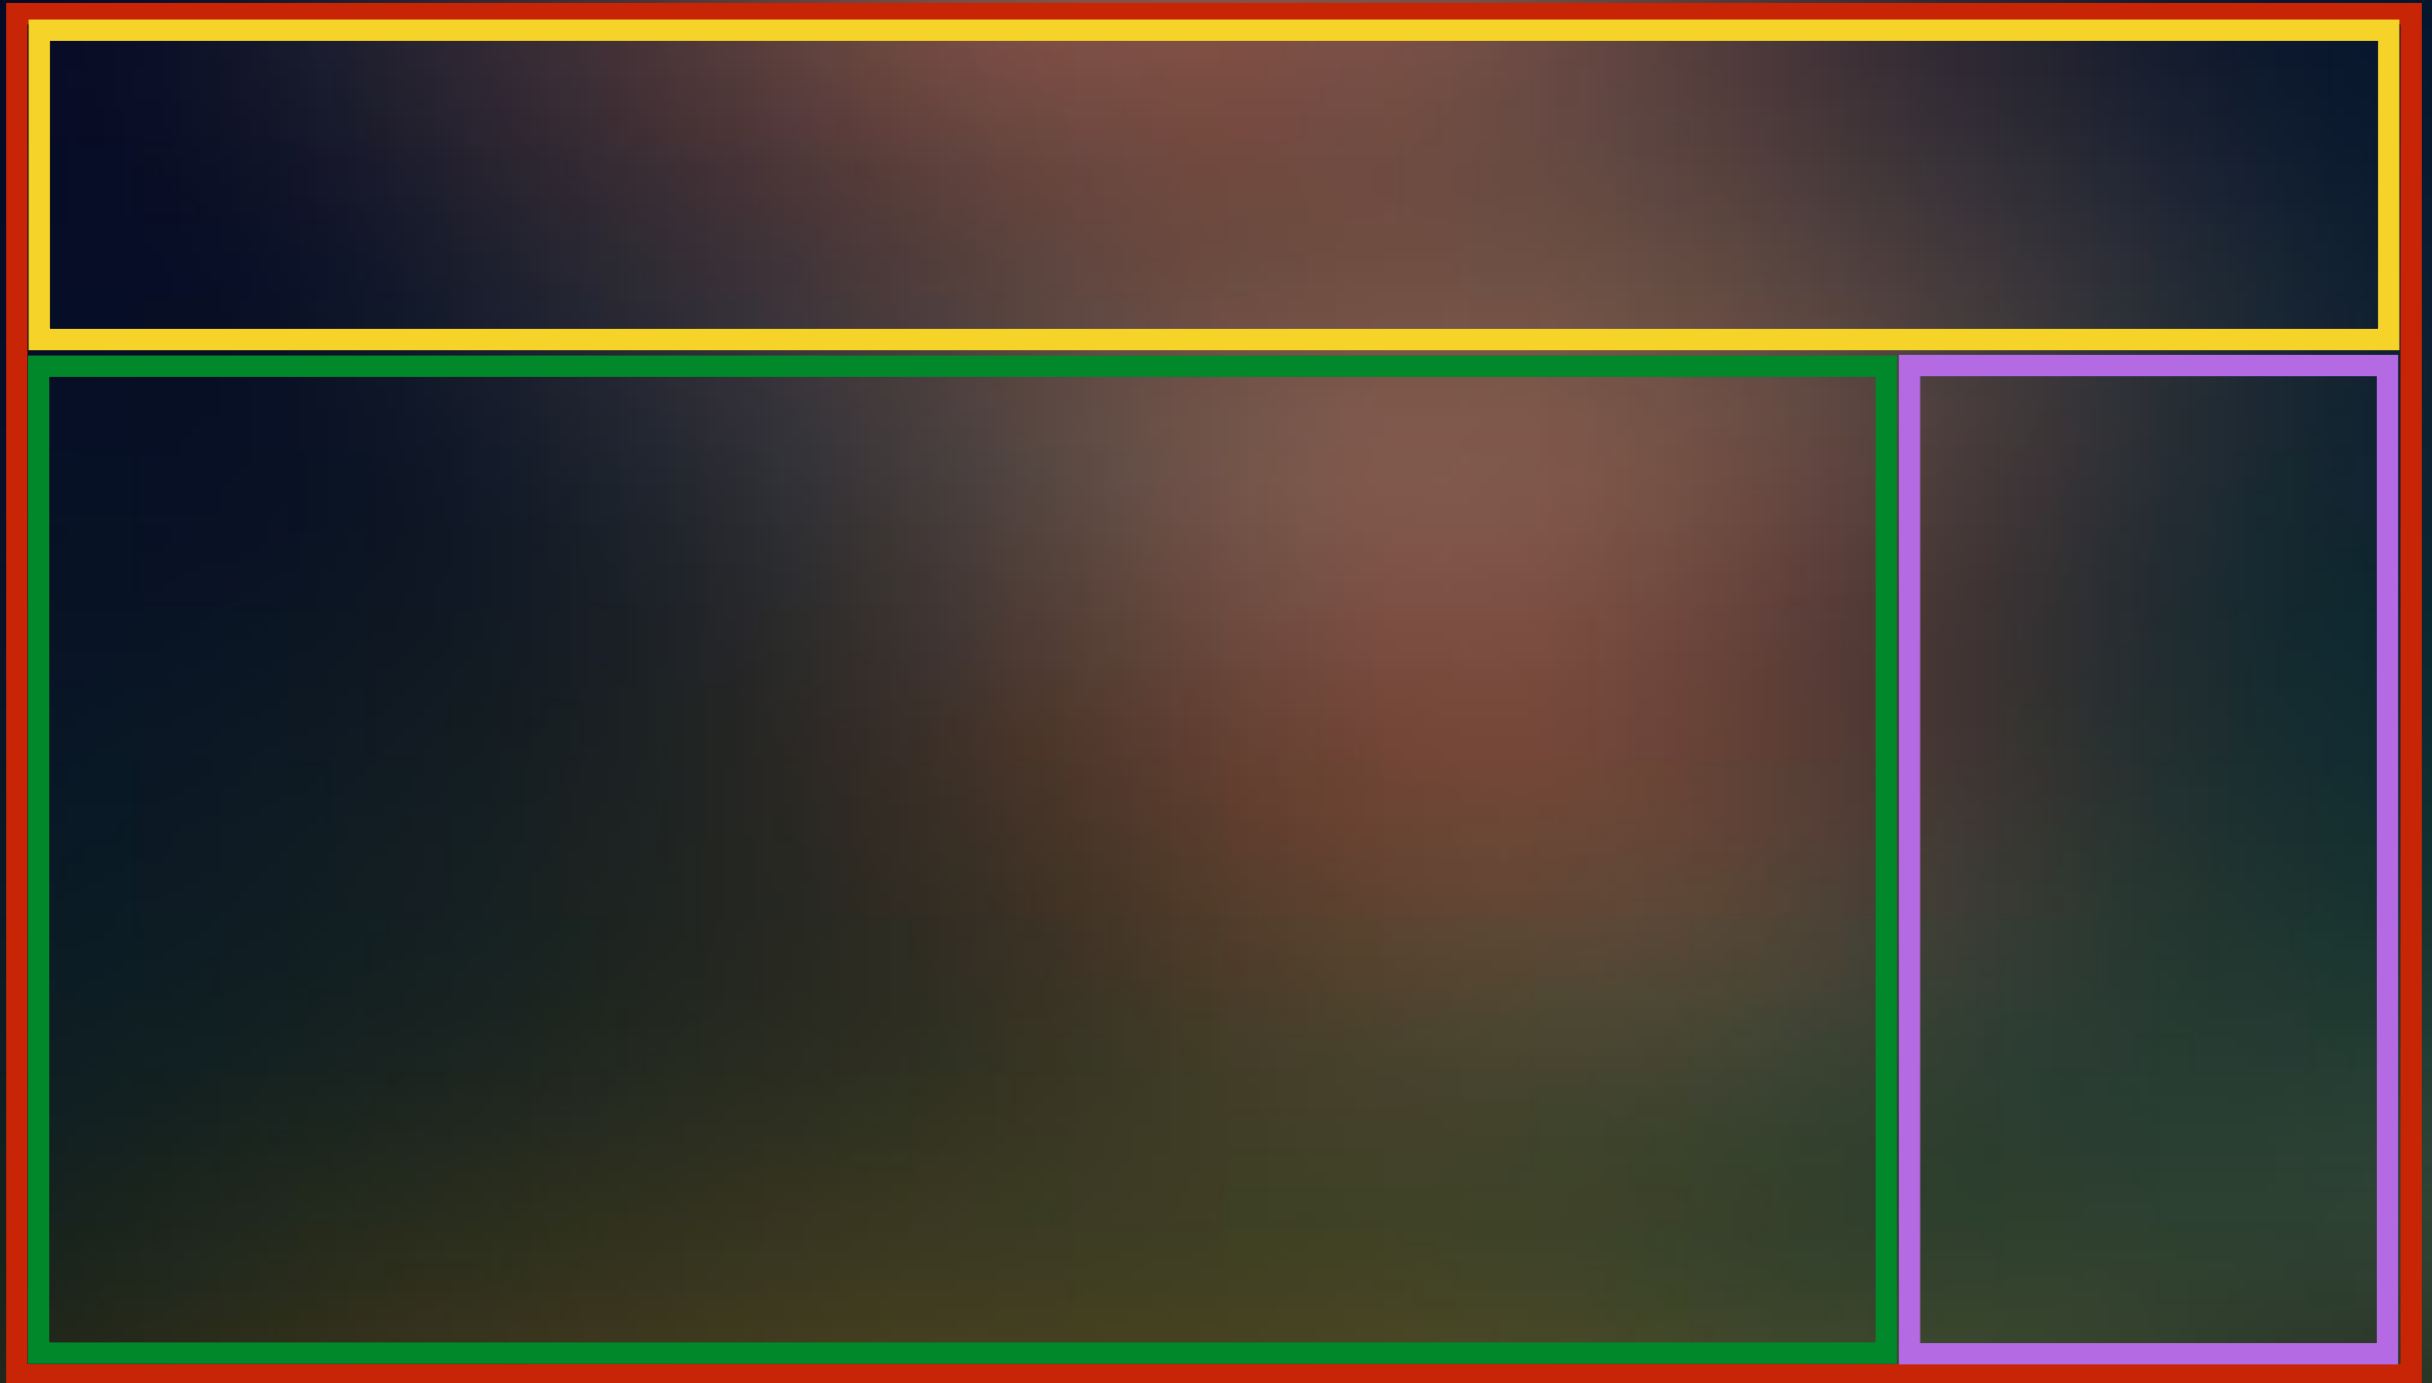

$ php app/console ezplatform:install clean

$ SYMFONY_ENV=dev php app/console server:run
```

# Start

- ✓ PHP Storm: Install Symfony Plugin
- ✓ Create a bundle
- ✓ Create a route
- ✓ Use the eZ PHP API to fetch contents

# View System

# View System
